

FREE T3 - Why?

'FREE T3' from proscription by the regulators of today's medical teaching and practice. The active thyroid hormone triiodothyronine (T3) replacements are approved by pharmaceutical regulation, yet the regulators, with the backing of medical councils and boards of medicine, prohibit medical practitioners from prescribing it - in spite of its vital necessity. **WHY?**

'FREE T3' is essential to life. The regulators refuse to recognise this. They have not, and will not, properly recognise their failure to alleviate the symptoms of hypothyroidism. They deliberately refuse to acknowledge the applicable and established medical science, which has been available for over 40 years and which demonstrates and explains their failures. Instead of analysing their failures, they make excuses. For example, you are suffering from a functional somatoform disorder –“it's all in your head”, or your symptoms are non-specific.

'FREE T3' is a slogan that stands for getting the proper diagnostics and medications for people suffering the symptoms of hypothyroidism, in spite of diagnoses that do not indicate thyroid dysfunction and therapies that are ineffective. The regulators are preventing medical practitioners from examining on the basis of the whole of the table shown on our Home Page (see “Important Information – ‘Greater Thyroid System’ ”). Consequently, doctors are unaware of the complexities and problems set out in this table. The regulators forbid the primary hormone T3, and ban supplements of other essential hormones, promoting T4-only therapy.

'FREE T3' NOW to provide a REAL SOLUTION for REAL SUFFERING
